

Specification Sheet

Noise Stop Joist Strips

- 5mm & 10mm Thickness
- Easy to install
- Reduces Impact
- Cut to any width

Description

The Structural advantage of this solution over other floating floor solutions is that can be applied direct to joist as opposed to over the floor boards. If you're looking to reduce impact sound with minimal floor build up we would recommend acoustic joist strips over the top of each joist.

Application

Stapled or bonded directly onto timber joists as part of a Floating Floor System.

Specification

Colour: Black-Grey. There is no added colour, however being made using recycled materials surface appearance may vary slightly.
Sheet Size: 1000mm x 1000mm (tolerance +/- 0.05%). Standard thickness is 5mm and 10mm thick.

Density: 570kg/m³
Tensile Strength: 0.32 N/mm²

Thermal Expansion

20° to 50° C is approx 0.5%
51° to 80° C is approx 1.0%

Temperature Application Range

-30° to +120°C (approximate suggestion)
